## Enabling the Vulnerability Management Process

#### The Internet Creates a Perimeter

## Corporate **Network** ... that needs defending

#### Increasing Attacks, More Intrusions

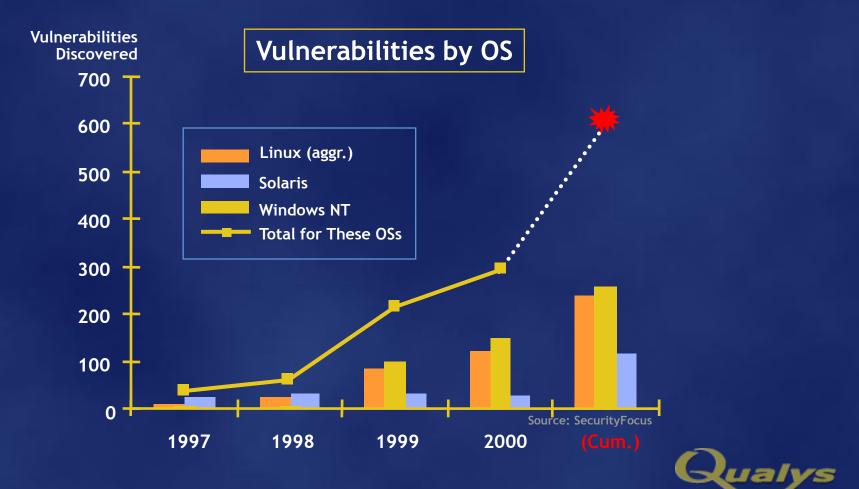

70% reported serious attacks
42% acknowledged financial loss
Total: \$265,589,940

- 59% reported more Internet attacks than internal attacks—trend is up
- 120% loss increase last year

2000 CSI/FBI Computer Crime and Security Survey

#### Vulnerability Trend is Up

#### Intrusion Risk: a Moving Target

Vulnerabilities keep appearing Overall network growth Adds and changes Software installs and upgrades Threats multiply Newly discovered vulnerabilities Newly invented "exploits" More and more "hobby hacking"

#### Executive Management Needs

- Ongoing, systematic, visible process
- Organization-wide overview
- Snapshot of overall exposure and trends
- Objective assessment of progress over time
- Strict confidentiality re. vulnerabilities
- Confirmation of return on security expenditures

#### IS Management Needs

Comprehensiveness Better leverage of existing resources Timely & painless updating Ease of use Flexible & convenient scheduling Minimum network impact Prioritized, detailed solutions

#### Vulnerability Management ...

## is a process, not a destination ...

## is the automated service that enables the process.

#### QualysGuard Components

QualysMap: graphic perimeter "discovery" QualysScan: comprehensive vulnerability assessment Reporting "CIO Report" IS detail report

Graphic perimeter map Comprehensive look at what is visible to potential intruder Covers entire domain Regenerated automatically with each scan

Regular or at-will scheduling Real-time, transparent updates Knowledge base: SecurityFocus superset Network integrity impact: zero Network performance impact: minimal

#### **Technology Features**

Architected from scratch as an Internet-based service Optimized for outside-in view Completely browser-based UI Pioneering low-load technology Ultra-high reliability design Immediate scalability

#### Industry-Leading Knowledge Base

Multiple sources
SecurityFocus
Channel partner contributions
Active internal research

#### CIO Report

# Vulnerabilities outstanding By severity level By IP with delta since last previous scan

IS Detail Report

Vulnerabilities outstanding
Diagnosis
Consequence
Solution
QualysMap drilldown

#### Security Measures

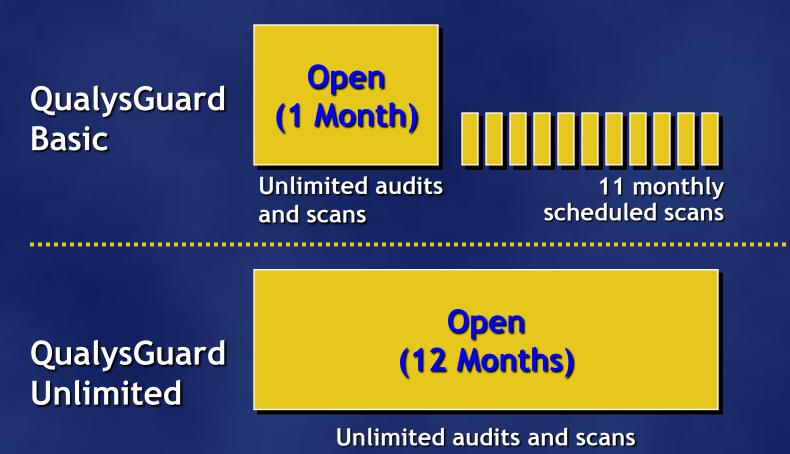

1024-bit encrypted map and scan results Subscriber connectivity by SSL **No** archiving **Completely inaccessible without** password-even by Qualys Top-tier hosts

#### **Distributed Scan Centers**

#### **Subscription Options**

## Qualys The Company

#### Experienced Management

**Gilles Samoun, CEO** (background: enterprise software) Hamid Farzaneh, VP Marketing (background: OEM hardware) Christophe Culine, VP Sales (background: communication services) Philippe Langlois, CTO (background: ISP, security consulting)

#### Brief History

Founded June 1999 July 1999: QualysGuard v.1 November 1999: QualysGuard v.2 **March 2000: U.S. headquarters** opened Investors VeriSign

Bessemer Venture Partners

#### Selected References

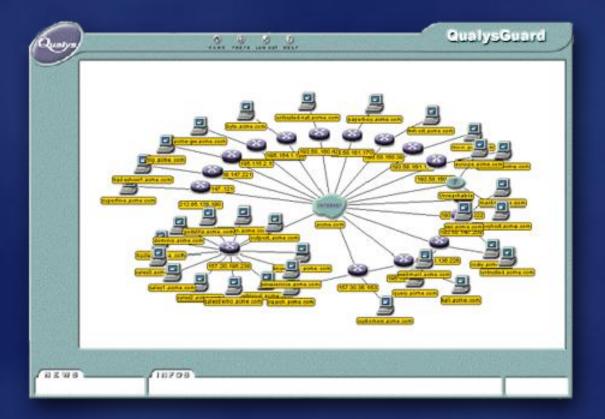

Vulnerability management is an ongoing process QualysGuard enables that process Carries out discovery Performs diagnosis Suggests solutions Measures progress
